All,

The enclosed graphics summarize our critique of the Whitefish City Hall concept. Our recommendations follow:

Historic Context - The community has stated that they want a building that fits into the Whitefish historic context. The architects have stated that they understand this requirement.

Recommendation #1 - Remove contemporary design features from building facades.

Building Lobby – The lobby is not generous in size with space for visitor seating or displays. The stairway crowds the lobby space.

Recommendation #2 – Develop a plan alternative that relocates the stair.

Building Entry – Two existing buildings on the Baker/Second Street intersection have diagonal corner entries . A City Hall corner entry would play off of the established urban design theme and make the intersection unique and special.

Recommendation #3 – Develop a plan alternative that provides a entry on the diagonal.
